DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

2. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Chen et al. (US 2001/0014529, dated 8/16/01).

Chen shows the method as claimed in figures 2A-2C and corresponding text in a method of manufacturing metallic interconnects wherein resist 208 is used to pattern dielectric layer 204 above copper layer 202 and, in the process copper oxide is formed and eliminated by the unique combination of an oxygen and nitrogen containing plasma [0021] – [0034].

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

7. Claims 7-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen et al. (US 2001/0014529, dated 8/16/01).

Chen shows the method substantially as claimed and as described in the preceding paragraphs.

Chen lacks anticipation only in not teaching that the substrate temperature may be higher for the process (200-250 degrees C), that the substrate temperature may be varied as well as the pressure and that a reactive ion treatment may be performed.

It would have been obvious to one of ordinary skill in the art to have used the higher temperature process in the method of Chen, with the motivation that Chen describes in the prior art that the O₂ plasma ashing process is a higher temperature step conventionally.

It would have been obvious to one of ordinary skill in the art to have varied the substrate temperature as well as the pressure and to have performed an reactive ion treatment, with the motivation that the temperature and pressure are parameters of optimization and the reactive ion treatment is conventional processing.
